1 Introduction 1
  1.1 Who Should Read This Book? ......................... 8
  1.2 Historical Trends in Deep Learning .................. 12

I Applied Math and Machine Learning Basics 27

2 Linear Algebra 29
  2.1 Scalars, Vectors, Matrices and Tensors ................. 29
  2.2 Multiplying Matrices and Vectors .................... 32
  2.3 Identity and Inverse Matrices ....................... 34
  2.4 Linear Dependence and Span .......................... 35
  2.5 Norms ............................................... 37
  2.6 Special Kinds of Matrices and Vectors ................. 38
  2.7 Eigendecomposition ................................... 40
  2.8 Singular Value Decomposition ......................... 42
  2.9 The Moore-Penrose Pseudoinverse ..................... 43
  2.10 The Trace Operator .................................. 44
  2.11 The Determinant .................................... 45
  2.12 Example: Principal Components Analysis .............. 45

3 Probability and Information Theory 51
  3.1 Why Probability? .................................... 52
3.2 Random Variables ........................................... 54  
3.3 Probability Distributions ................................... 54  
3.4 Marginal Probability ....................................... 56  
3.5 Conditional Probability .................................... 57  
3.6 The Chain Rule of Conditional Probabilities .......... 57  
3.7 Independence and Conditional Independence .......... 58  
3.8 Expectation, Variance and Covariance ................. 58  
3.9 Common Probability Distributions ....................... 60  
3.10 Useful Properties of Common Functions ............... 65  
3.11 Bayes’ Rule ............................................... 68  
3.12 Technical Details of Continuous Variables .......... 69  
3.13 Information Theory ...................................... 71  
3.14 Structured Probabilistic Models ......................... 73  

4 Numerical Computation ...................................... 78  
4.1 Overflow and Underflow ................................... 78  
4.2 Poor Conditioning .......................................... 80  
4.3 Gradient-Based Optimization ............................. 80  
4.4 Constrained Optimization ................................ 91  
4.5 Example: Linear Least Squares ........................... 94  

5 Machine Learning Basics .................................. 96  
5.1 Learning Algorithms ...................................... 97  
5.2 Capacity, Overfitting and Underfitting ............... 108  
5.3 Hyperparameters and Validation Sets ................. 118  
5.4 Estimators, Bias and Variance ......................... 120  
5.5 Maximum Likelihood Estimation ......................... 129  
5.6 Bayesian Statistics ....................................... 133  
5.7 Supervised Learning Algorithms ....................... 137  
5.8 Unsupervised Learning Algorithms ..................... 142  
5.9 Stochastic Gradient Descent ............................. 149  
5.10 Building a Machine Learning Algorithm .............. 151  
5.11 Challenges Motivating Deep Learning ................. 152  

II Deep Networks: Modern Practices .................... 162  
6 Deep Feedforward Networks ............................. 164  
6.1 Example: Learning XOR ................................. 167  
6.2 Gradient-Based Learning ................................. 172
## CONTENTS

6.3 Hidden Units ......................................................... 187
6.4 Architecture Design .................................................. 193
6.5 Back-Propagation and Other Differentiation
   Algorithms .............................................................. 200
6.6 Historical Notes ........................................................ 220

7 Regularization for Deep Learning 224
   7.1 Parameter Norm Penalties ......................................... 226
   7.2 Norm Penalties as Constrained Optimization .................. 233
   7.3 Regularization and Under-Constrained Problems .............. 235
   7.4 Dataset Augmentation .............................................. 236
   7.5 Noise Robustness ................................................... 238
   7.6 Semi-Supervised Learning ......................................... 240
   7.7 Multitask Learning .................................................. 241
   7.8 Early Stopping ....................................................... 241
   7.9 Parameter Tying and Parameter Sharing ......................... 249
   7.10 Sparse Representations ............................................ 251
   7.11 Bagging and Other Ensemble Methods .......................... 253
   7.12 Dropout ............................................................ 255
   7.13 Adversarail Training ............................................... 265
   7.14 Tangent Distance, Tangent Prop and Manifold
       Tangent Classifier .................................................. 267

8 Optimization for Training Deep Models 271
   8.1 How Learning Differs from Pure Optimization ................. 272
   8.2 Challenges in Neural Network Optimization .................... 279
   8.3 Basic Algorithms .................................................. 290
   8.4 Parameter Initialization Strategies ................................ 296
   8.5 Algorithms with Adaptive Learning Rates ....................... 302
   8.6 Approximate Second-Order Methods ............................. 307
   8.7 Optimization Strategies and Meta-Algorithms .................. 313

9 Convolutional Networks 326
   9.1 The Convolution Operation ...................................... 327
   9.2 Motivation ......................................................... 329
   9.3 Pooling ........................................................... 335
   9.4 Convolution and Pooling as an Infinitely Strong Prior ....... 339
   9.5 Variants of the Basic Convolution Function .................... 342
   9.6 Structured Outputs ................................................ 352
   9.7 Data Types ........................................................ 354
CONTENTS

9.8 Efficient Convolution Algorithms ........................................ 356
9.9 Random or Unsupervised Features ........................................ 356
9.10 The Neuroscientific Basis for Convolutional Networks .................. 358
9.11 Convolutional Networks and the History of Deep Learning ............... 365

10 Sequence Modeling: Recurrent and Recursive Nets 367
10.1 Unfolding Computational Graphs ......................................... 369
10.2 Recurrent Neural Networks .............................................. 372
10.3 Bidirectional RNNs ......................................................... 388
10.4 Encoder-Decoder Sequence-to-Sequence Architectures ..................... 390
10.5 Deep Recurrent Networks ............................................... 392
10.6 Recursive Neural Networks .............................................. 394
10.7 The Challenge of Long-Term Dependencies ................................ 396
10.8 Echo State Networks ....................................................... 399
10.9 Leaky Units and Other Strategies for Multiple Time Scales ................ 402
10.10 The Long Short-Term Memory and Other Gated RNNs ...................... 404
10.11 Optimization for Long-Term Dependencies ................................ 408
10.12 Explicit Memory ........................................................... 412

11 Practical Methodology 416
11.1 Performance Metrics ....................................................... 417
11.2 Default Baseline Models .................................................. 420
11.3 Determining Whether to Gather More Data ................................ 421
11.4 Selecting Hyperparameters ................................................ 422
11.5 Debugging Strategies ....................................................... 431
11.6 Example: Multi-Digit Number Recognition .................................. 435

12 Applications 438
12.1 Large-Scale Deep Learning ................................................ 438
12.2 Computer Vision ............................................................ 447
12.3 Speech Recognition ........................................................ 453
12.4 Natural Language Processing ............................................... 456
12.5 Other Applications .......................................................... 473
III Deep Learning Research

13 Linear Factor Models

13.1 Probabilistic PCA and Factor Analysis 486
13.2 Independent Component Analysis (ICA) 487
13.3 Slow Feature Analysis 489
13.4 Sparse Coding 492
13.5 Manifold Interpretation of PCA 496

14 Autoencoders

14.1 Undercomplete Autoencoders 500
14.2 Regularized Autoencoders 501
14.3 Representational Power, Layer Size and Depth 505
14.4 Stochastic Encoders and Decoders 506
14.5 Denoising Autoencoders 507
14.6 Learning Manifolds with Autoencoders 513
14.7 Contractive Autoencoders 518
14.8 Predictive Sparse Decomposition 521
14.9 Applications of Autoencoders 522

15 Representation Learning

15.1 Greedy Layer-Wise Unsupervised Pretraining 526
15.2 Transfer Learning and Domain Adaptation 534
15.3 Semi-Supervised Disentangling of Causal Factors 539
15.4 Distributed Representation 544
15.5 Exponential Gains from Depth 550
15.6 Providing Clues to Discover Underlying Causes 552

16 Structured Probabilistic Models for Deep Learning

16.1 The Challenge of Unstructured Modeling 556
16.2 Using Graphs to Describe Model Structure 560
16.3 Sampling from Graphical Models 577
16.4 Advantages of Structured Modeling 579
16.5 Learning about Dependencies 579
16.6 Inference and Approximate Inference 580
16.7 The Deep Learning Approach to Structured Probabilistic Models 581

17 Monte Carlo Methods

17.1 Sampling and Monte Carlo Methods 587
CONTENTS

17.2 Importance Sampling .................................................. 589
17.3 Markov Chain Monte Carlo Methods ................................. 592
17.4 Gibbs Sampling ............................................................ 596
17.5 The Challenge of Mixing between Separated Modes .......... 597

18 Confronting the Partition Function ................................. 603
18.1 The Log-Likelihood Gradient ......................................... 604
18.2 Stochastic Maximum Likelihood and Contrastive Divergence .. 605
18.3 Pseudolikelihood .......................................................... 613
18.4 Score Matching and Ratio Matching ............................... 615
18.5 Denoising Score Matching .............................................. 617
18.6 Noise-Contrastive Estimation ........................................ 618
18.7 Estimating the Partition Function ................................... 621

19 Approximate Inference .................................................... 629
19.1 Inference as Optimization ............................................. 631
19.2 Expectation Maximization ............................................. 632
19.3 MAP Inference and Sparse Coding ................................ 633
19.4 Variational Inference and Learning ................................. 636
19.5 Learned Approximate Inference ..................................... 648

20 Deep Generative Models ................................................ 651
20.1 Boltzmann Machines ..................................................... 651
20.2 Restricted Boltzmann Machines ..................................... 653
20.3 Deep Belief Networks ................................................... 657
20.4 Deep Boltzmann Machines ............................................ 660
20.5 Boltzmann Machines for Real-Valued Data ........................ 673
20.6 Convolutional Boltzmann Machines ................................ 679
20.7 Boltzmann Machines for Structured or Sequential Outputs ... 681
20.8 Other Boltzmann Machines ............................................ 683
20.9 Back-Propagation through Random Operations .................. 684
20.10 Directed Generative Nets ............................................... 688
20.11 Drawing Samples from Autoencoders ............................... 707
20.12 Generative Stochastic Networks .................................... 710
20.13 Other Generation Schemes .......................................... 712
20.14 Evaluating Generative Models ...................................... 713
20.15 Conclusion ..................................................................... 716
